

Crypto

ECC

用 Sage 再做个逆运算再 n2s 就完事了。数据太大，不能直接复制粘贴，耗费了点时间。

```
p =
74997021559434065975272431626618720725838473091721936616560359000648651891507

```

Misc

摆烂

在 WinHex 里查看下载得到的压缩包，发现是一个png-【并不】-和一个压缩包，使用复制粘贴大法分离开。png 其实是一个 apng surprise，找了个能分离 apng 的软件把两张图分离开。分开之后，是盲水印，借助 github 上的 BWM 解开，得到了压缩包密码。解压缩之后得到了二维码碎片，按照定位点和白边拼好【不要旋转】，扫描二维码，得到了一段话，话里面有零宽字符，在 github 上有一个解密的项目【说实话真难找，好找的项目的用不了】，揭秘之后就得到了 flag。
